CLIMATE ACTION PLAN CONSISTENCY CHECKLIST P-30

PURPOSE

In September 2015, the City of Carlsbad adopted a Climate Action Plan (CAP) that outlines actions that the city will undertake to achieve its proportional share of state greenhouse gas (GHG) emissions reductions. This checklist contains measures that are required to be implemented on a project-by-project basis to ensure that the specified emissions targets identified in the Climate Action Plan (CAP) are achieved. Implementation of these measures will ensure that new development is consistent with the CAP's assumption for relevant CAP strategies toward achieving the identified greenhouse gas (GHG) reduction targets. In this manner, a project's incremental contribution to a cumulative GHG emissions effect may be determined not to be cumulatively considerable if it complies with the requirements of the CAP, in accordance with CEQA Guidelines Sections 15064(h)(3), 15130(d), and 15183(b).*

*City staff are currently not assessing the greenhouse gas impacts of California Environmental Quality Act projects by using the Climate Action Plan as a qualified GHG reduction plan under CEQA section 15183.5(b). Please consult with the Planning Department for further guidance. Additional information may be found on the Climate Action Plan Update and Vehicle Miles Traveled calculations staff report.

This checklist is intended to assist project applicants in identifying CAP ordinance requirements and demonstrate how their project fulfills those requirements. This checklist is to be completed and included in applications for new development projects that are subject to discretionary review or require a building permit.

APPLICATION SUBMITTAL REQUIREMENTS

- The completed checklist must be included in the project submittal package or building permit application. Application submittal procedures can be found on the City of Carlsbad website. This checklist is designed to assist the applicant in identifying the minimum CAP-related requirements specific to their project. However, it may be necessary to supplement the completed checklist with supporting materials, calculations or certifications, to demonstrate full compliance with CAP requirements. For example, projects that propose or require a performance approach to comply with energy-related measures will need to attach to this checklist separate calculations and documentation as specified by the ordinances.
- If an item in the checklist is deemed to be not applicable to a project, or is less than the minimum required by ordinance, an explanation must be provided to the satisfaction of the Planning Division or building official.
- The requirements in the checklist will be included in the project's conditions of approval or issuance of building permit.
- Details on CAP ordinance requirements are available on the city's website.

STEP 1: LAND USE CONSISTENCY

The first step in determining CAP consistency for discretionary development is to assess the project's consistency with the growth projections used in the development of the CAP. This section allows the city to determine a project's consistency with the land use assumptions used in the CAP. Projects found not to be consistent with the CAP's land use assumptions and that are projected to emit at or above the CAP screening threshold of 900 metric tons of CO₂ equivalent (MTCO₂e) GHG will be subject to a project-specific analysis of GHG emissions' impact on the environment in accordance with the requirements of the California Environmental Quality Act (CEQA). This may result in GHG-reducing mitigation measures applied as a condition of project approval in addition to compliance with the CAP ordinance requirements identified in Step 2 of this checklist.

STEP 1 Land Use Consistency						
NEWS	ecklist Item heck the appropriate box and provide an explanation and	supporting documentation for your answer)	Yes	No		
A. Is the proposed project consistent with the existing General Plan land use and specific/master plan or zoning designations? OR, If the proposed project is not consistent with the existing land use plan and zoning designations, does the project include a land use plan and/or specific plan, master plan or zoning designation amendment that would result in an equivalent or less GHG-intensive project when compared to the existing designations?						
pro Clin	Yes", proceed to Step 2 of the checklist. For the second option under oposed designation(s) for comparison. GHG emissions must be estimated Action Plan. No", proceed to Question B. The CAP established a screening threshold of 900 MTCO ₂ e/year for consistency with the CAP. The types and sizes of typical projects list screening threshold. Will the proposed land use change result in the content of the second option under the second option under the second option under the second option under the second option of the second option option option option option of the second option optio	new development projects to assist in determining ted below have been determined to correspond to the CAP				
	Single-Family Housing: 50 dwelling units Multi-Family Housing: 70 dwelling units Office: 35,000 square feet Retail Store: 11,000 square feet Grocery Store: 6,300 square feet	ie construction of less than any one of the following:				
		types, provide a project-specific GHG emissions analysis to creening threshold.				

If "Yes", proceed to Step 2 of the checklist.

If "No", the project's GHG impact is potentially significant and must be analyzed in accordance with CEQA. Applicant must prepare a Self-developed GHG emissions reduction program in accordance with the City of Carlsbad <u>Guidance to Demonstrating Consistency with the Climate Action Plan</u> to demonstrate how it would offset the increase in emissions over the existing designations. The project must incorporate each of the applicable measures identified in <u>Step 2</u> to mitigate cumulative GHG emissions impacts unless the decision maker finds that a measure is infeasible in accordance with California Environmental Quality Act Guidelines Section 15091. Mitigation in lieu of or in addition to the measures in <u>Step 2</u> may be required, depending on the results of the project-specific GHG impact analysis. Proceed and complete a project-specific Self-developed GHG emissions reduction program and <u>Step 2</u> of the Checklist.

P-30 Page 2 of 7 Revised 02/20

STEP 2: CAP ORDINANCE COMPLIANCE REQUIREMENTS

P-30

Completion of this checklist will document a project's compliance with CAP ordinances, and in turn, demonstrate consistency with the applicable measures and actions of the CAP. The compliance requirements in this Step 2 apply to development projects that require a building permit. All other development projects shall implement all emissions-related mitigation measures from the <u>General Plan Update EIR</u>.

UNIT \$ 2689	1,700 4	ONE	2.1224				
				0			
		Total System Size:	6.361 L kWdc				
kWdc = (CFAx.572) / 1,000 + (1.15							
*Formula calculation where CFA = If proposed system size is less than		_	s per plan type				
 B. Nonresidential new construction or alterations ≥\$1,000,000 BPV and affecting ≥75% existing floor area, or addition that increases roof area by ≥2,000 square feet. Please refer to Carlsbad Ordinance CS-347, Section 6 when completing this section. 							
Choose one of the follow	ving methods:		18				
☐ Gross Floor Area (GFA) Method							
GFA: Min. System Size: kWdc							
☐ If < 10,000s.f. Enter: 5 kWdc							
☐ If ≥ 10,000s.f. calculate: 15 kWdc x (GFA/10,000) **							
**Round building size factor to nearest tenth, and round system size to nearest whole number.							
☐ Time- Dependent Valuation Method							
Annual TDV Energy use:*** x .80= Min. system size: kWdc							
***Attach calculation documentation using modeling software approved by the California Energy Commission.							

3.1	Water Heating						
A.	4						
	Please refer to Carlsbad C	Ordinance CS-347 and	CS-348 when complet	ing this section.			
	For systems serving indiv	idual dwelling units	choose one:				
ė,	only)			on AND drain water heat rec			
	 ☐ Heat pump water heater AND PV system .3 kWdc larger than required in CA Energy Code Section 120.10 (for high rise residential hotel/motel) or 150.1(c) 14 (for low-rise residential) ☐ Heat pump water heater meeting Tier 3 or higher NEEA Advanced Water Heating Specification 						
	☐ Exception:	system that is either	.60 solar savings fra	ction or 40 s.f. solar collector	S		
-	☐ For systems serving mult	ple dwelling units,	install a central wate	r-heating system with all of t	he following:		
	☐ Gas or propane wate	r heating system					
				motel) or CS-348 (low-rise res	sidential)		
	☐ Solar water heating system that is either: ☐ .60 solar savings fraction or 40 s.f. solar collectors						
	☐ .40 solar savings		water heat recovery				
	☐ Exception:						
В.	3. Nonresidential new construction Please refer to Carlsbad Ordinance CS-347 when completing this section.						
	☐ Water heating system de	rives at least 40% of	its energy from one	of the following (attach docu	mentation):		
	☐ Solar-thermal ☐ Photovoltaics ☐ Recovered energy						
	\square Water heating system is (
	☐ Heat pump water he						
	☐ Electric resistance water heater(s) ☐ Solar water heating system with .40 solar savings fraction						
	☐ Exception:	,					
					~		
A F	lectric Vehicle Charging		D WHO THE STATE	The second second second			
Α							
A.	A. Residential New construction and major alterations* Please refer to Carlsbad Ordinance CS-349 when completing this section.						
	☐ One and two-family residential dwelling or townhouse with attached garage:						
	☐ One EVSE ready parking space required ☐ Exception :						
	Multi-family residential:						
	Total Parking Spaces EVSE Spaces						
	Proposed	Capable	Ready	Installed	Total		
	6		3- /UNI		3		
	Calculations: Total EVSE spaces = .10						
	EVSE Installed = Total EVSE Spaces x .50 (rounded up to nearest whole number) EVSE other= Total EVSE spaces — EVSE Installed						
	(FVSE other may be "Canable" "Ready" or "Installed")						

include an electrical service panel upgrade; (2) for multifamily dwellings (three units or more without attached garages), alterations have a building permit valuation ≥ \$200,000, interior finishes are removed and significant site work and upgrades to structural and mechanical, electrical, and/or plumbing systems are proposed. Nonresidential new construction (includes hotels/motels) ☐ Exception : **EVSE Spaces Total Parking Spaces** Total Proposed Capable Ready Installed Calculation: Refer to the table below: Number of required EVSE Installed Spaces Total Number of Parking Spaces provided Number of required EV Spaces 0-9 10-25 2 1 26-50 4 2 3 51-75 6 76-100 9 5 101-150 12 6 151-200 17 9 201 and over 10 percent of total 50 percent of Required EV Spaces 5. Transportation Demand Management (TDM) List each proposed nonresidential use and gross floor area (GFA) allocated to each use. Employee ADT/1,000 square feet is selected from the City of Carlsbad Employee ADT Table. Employee ADT/1,000 S.F. Total Employee ADT Total If total employee ADT is greater than or equal to 110 employee ADT, a TDM plan is required. Notwithstanding the 110 employee ADT threshold above, General Plan Mobility Element Policy 3-P.11 requires new development that adds vehicle traffic to vehicle LOS-exempt street facilities to implement TDM and transportation system management strategies. Please consult with City of Carlsbad Land Development Engineering (LDE) staff to determine whether this policy applies to your project. TDM plan required: Yes 🗆 (staff initials) LDE Staff Verification:

*Major alterations are: (1) for one and two-family dwellings and townhouses with attached garages, alterations have a building permit valuation ≥ \$60,000 or
