

CONSTRUCTION NOTICE

Slurry Seal Street Improvement Project

About the Project

As part of the city's ongoing program to maintain its roadways, crews will be performing slurry seal work on local streets over the next several weeks. This notice is sent to residents who live on a street scheduled for this work. For a complete listing of streets identified for slurry seal, visit www.carlsbadca.gov.

Slurry seal is a pavement preservation method consisting of an asphalt emulsion, sand and rock which is applied to the street surface. This cost-effective maintenance treatment extends the life of streets. Slurry seal requires the closure of the street for one day, during the contractor's work hours. In case of inclement weather, dates and times of scheduled work may change.

What to Expect During Construction

- Work primarily scheduled weekdays, 7:30 a.m. to 5 p.m.
- Contractor notification will be provided 72 hours in advance
- Temporary "no parking" signs placed on the street with work date
- Vehicles will not be allowed to drive on new asphalt surfaces until dry
- Avoid walking, biking and skateboarding on new roads until construction signs are removed
- Plan ahead and move your vehicle out of work areas prior to the morning start time
