

Village and Barrio Traffic Circles

Carlsbad Barrio Area

The Village and Barrio Traffic Circles Project is an infrastructure improvement project being planned as part of the Village and Barrio Master Plan. Safety and livability were emphasized by the community during the development of the master plan. The construction of traffic circles and traffic calming measures at intersections throughout the Barrio will help improve traffic flow and enhance safety.

The master plan identifies eight traffic circle locations that were chosen based on the goal of calming traffic in the Barrio. These locations were vetted during the public outreach process for the master plan. Preliminary engineering studies found that two of the eight locations would not be able to accommodate traffic circles. Other traffic calming measures, such as raised islands and high-visibility crosswalks, are planned at these two locations.

Preliminary traffic circle designs, as well as the opportunity to incorporate public art, will be shared with the community to ensure that the project remains in line with the neighborhood needs and expectations.

Possible Traffic Circle Concept Design

Preliminary traffic circle designs may be ready for review in early-2021. Construction is estimated to begin in mid-2021.

Project Benefits:

- Enhance safety
- Slow traffic
- Improve neighborhood aesthetics
